### **Selection of the topic**

The topic and concept of 13th year of exhibition in 2020 is a reflection of current social situation. We would like to draw attention to water as a topical phenomenon which whirls society and to water as a source of lively energy.

Apart from social aspect, this year's topic reflects even responses of former twelve years which unambiguously imply that just artefacts involved in water areas were the most successful both with professional and laic public. Let that be legs jutting out of water in blind shoulder of the Malše river by Kurt Gebauer or sculptures placed in water by Michal Gabriel

### **Content**

Works of art will appear both on the surface and on the banks, in the surroundings of rivers and water areas. Sculptures, objects and installations will mostly be installed on water: they will be placed directly on the surface or installed on small pontoons. Further installations will get out of water, other will penetrate even deeper into the city. Some of the objects will be anchored and people interested will be able to sail by boats towards them, others will be left to sail inspectedly. (Technical side of the plan is prepared and consulted in accordance with the rules which are set for temporary installations by the Vltava Catchment).
